THE ARCHITECTURE & DESIGN NETWORK

—
archipassport

Archipassport is the international network dedicated to architecture and design composed of 5 specialized websites: Archiproducts is the largest permanent virtual exhibition of architecture and design - Archilovers is the social network for architects and designers worldwide - Edilportale is the construction industry search engine (Italy) - Archiportale is the online magazine for architecture and design (Italy) - Sayduck is the most complete international source for 3D models of design products and Augmented Reality.

Notification Settings • Unsubscribe

edilportale **archiportale** **archiproducts** **BIM.archiproducts** **archilovers** **@sayduck**

Archilovers is the first real social network for architects, designers lovers of architecture.

It is an **international** platform, totally **free**, with **boundless space** and no constraints, where you can post projects, exchange opinions and interests, get to know designers and architects and create your professional network.

It is the first online application allowing you to manage both **your own professional profile** and that of your **design office**, of **your company**, of your **occasional team**. An open community that is based on real collaborations, professional interactions and networks.

But it is also simply a **large online library** where you can browse amongst contemporary architecture projects, designers of international fame but above all small design offices spread out here and there all over the world, which will surprise you for their quality and creativity.

Apart from these basic functions which it shares with the most widespread social networks, **Archilovers** marks a turning point in how architecture and design are communicated and "consumed".

The project fact sheet is the showcase of your works, as they progress or still in the design phase. You can publish information regarding projects you have written, co-written or which you are in some way professionally involved, respecting copyright and privacy. Your project fact sheets are accessible from the homepage of Archilovers under the item "Project", or amongst the results of a search, or directly from your profile. For each project, you can add an unlimited number of photos, media, renderings, drawings, text description and other material.

"Tag the products" is this application's pay off. Like on Facebook you can tag your friends in the photos, on archilovers then **tag the products** that you have chosen for your projects. Some already say that it is fantastic. It seems a simple technical detail, actually it is a real turning point in how architecture is communicated and exploited. Now, every time we browse the photos of a project, we can finally find out what the product used is called, look at its technical fact sheet and contact the manufacturer. On **Archilovers** you can tag both the most common products and less famous products like niche products, technical products or products designed especially for that application or handmade products with hypertext links. At last no geographical limits

Archilovers is indeed linked to archiproducts.com, the largest international website for architecture and design products, which belongs to the same network as **Archilovers**, which anybody can access and publish their catalogues. On **Archilovers** you can, therefore, express yourself professionally by choosing the most innovative, beautiful and intelligent products. Then, maybe your projects will enter manufacturers' reference-books.

Stories are articles, posts, reviews that all Archilovers users can write on their own projects, on other projects and designers, on experiences of product use, on events or even only on things connected to architecture, like travel or curiosities. Stories are like articles of a blog, but exploit social interaction, connections and social networks. When writing a story you can add an external video, link and image, connect/quote projects, designers, topics, products and other stories in it. You can comment, share and follow a story just like you are used to doing with all the other Archilovers content. The advantage for you will be that of constructing a rich and dynamic blog, with interactive content and the possibility of exchange with other users. **And then there are the albums:** For the first time your project can be put into one or more topic albums, so that other users consult your profile for different reasons from simply project type or location. An example? If you have designed a beautiful internal staircase, you can inform our editorial staff and they will graphically indicate your project in the relevant album "internal staircases" and all the visitors interested in this topic will have another reason for discovering your project and maybe contacting you for new jobs or potential collaborations.

Archilovers' mission is to promote communication but above all to find new opportunities, multiply possibilities and expand the network.

The social platform on **Archilovers** is similar to that of Facebook, in terms of operation and concept: instant messaging, mail, notifications, creating groups, love and unlove, basically everything you need to interact and create networks on various levels with your professional community. However, unlike the other professional social networks, on **Archilovers** you can also talk about yourself through your personal attitudes, your travels, your photos, your stories and your videos. No limits.

Because we want archilovers to be your favourite space, forever.

Create your profile and begin your experience.
